*Coeper, Geasey, Dinnel*
1. clarify research questions
   a. Area I — excavation of the well — research questions
      integrity of well
      information to get out

   b. Area II — how would mitigation address research question?
      — is integrity mitigated by erosion
      — [horizontal + vertical separation of materials]

   c. Area III — significance of the feature —
      what we hope to find + how it relates to N.R. quality

   d. Area IV — what would this again tell us about the Manor
      — what about the previous component — its significance + research
      — what exactly was found — pear tree — potential

   e. Area V — ice house

need to demonstrate what will be found —
